

The Global Voice for the Radiation Processing Industry

Communicate. Educate. Advocate.

The International Irradiation Association (iia) is a not-for-profit organisation that supports the global radiation processing industry and scientific community.

Communication, Education and Advocacy is at the core of our activities. Our mission is to support and to promote the safe and beneficial use of irradiation which we passionately believe contributes to the lives of the world's population.

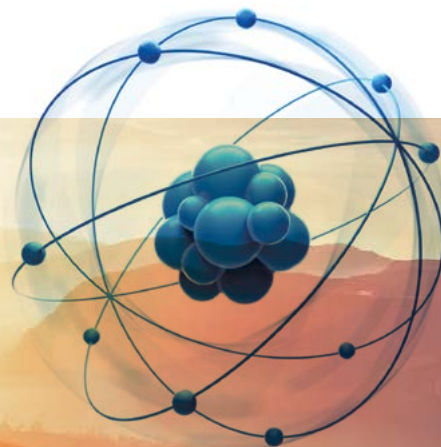

Membership of the Association is diverse and includes corporations, research institutes, universities and government affiliated departments around the world. Increasingly, the Association is forging relationships with regional, national and technology specific organisations whose aims are aligned with those of iia. Our members are leaders in the irradiation community.

The association has a small management team and an elected board of directors all of whom have extensive experience working within the irradiation industry.

The aims of the Association are to:

- Serve as the global voice for the radiation processing industry
- Support members in advancing the safe and beneficial use of irradiation technology
- Represent the interests of members at a legislative and regulatory level
- Promote commerce in gamma, E-beam and X-ray irradiation technology
- Facilitate the commercialisation of developing irradiation technology and applications
- Provide a forum for sharing important information about the irradiation industry

iia has represented the interests of the radiation processing industry for over 40 years. The Association promotes radiation processing and supports the developments in gamma, electron beam and X-ray technologies.

Benefits of Membership

Representation

You will benefit from the strength in numbers that the Association brings. This strength enables the Association to represent the views of its member at a national and international level.

Forum

You will have a forum through which you can fully participate in the important issues that impact the irradiation industry. The association supports its members in promoting the commercialisation and safe use of irradiation technology

Recognition

You will be recognised as leaders in the irradiation industry. You will be part of a respected community that has made a global contribution to the industry for over 25 years.

Information

You will benefit from access to a library of information that is only made available to members. If the information that you require is not readily available, then we will try to assist in finding answers to your questions.

News & Updates

You will be kept up to date with news and industry developments through postings on the iia website, the iia newsletter and social media. The Association regularly publishes important market, regulatory, operational and other industry news that may impact on your business

Promotion

You will be able to use the iia newsletters, both scientific and general, for agreed promotional activities. The Association aims to highlight the capabilities, skills and expertise of its members.

Networking

You will be able to expand your industry network because you are part of the core irradiation community. You will have a diverse and knowledgeable network of contacts with which you may share ideas, information and opportunities.

Discounts

You will benefit from discounts when registering to attend or exhibit at iia organised or jointly organised events. This includes discounted registration for the International Meeting on Radiation Processing, the premier event for the radiation processing industry.

Use of iia logo

You will be able to add credibility and demonstrate your commitment to the irradiation industry by using the International Irradiation Association logo on your website and marketing material.

For further information about iia membership and the online membership application form, please see iia-global.com/membership.

The International Meeting on Radiation Processing (IMRP) is recognised as the leading international event for those involved in the application or science of radiation processing. This conference and exhibition is hosted by iia on a different continent every two to three years.

Science and Research

iia helps to serve as a bridge between the scientific and research community and the commercial side of the irradiation processing industry. By making the work of scientists, institutes and research facilities more visible to the industry the Association endeavours to help connect people and organizations with common interests.

iia helps to foster relationships and build awareness across scientific and research disciplines and industry sectors. To facilitate this, iia has launched a Scientific Newsletter which helps to highlight research connected with polymers, biologics and nano materials.

iia supports research by supporting scientific conferences and symposia as well as by giving awards that recognize outstanding scientific research.
